Student Feedback

It was very difficult to punch 11 holes into one dam without a bad punch occurring. I also found it tricky to place each hole onto each corresponding tooth without a tear occurring. The demonstrator taught me to floss from the top of the tooth into the inter-proximal area to avoid tears.

Evaluation for DDI-DDS: Dental Dam Isolation (DDS)

Marking Checklist	Student	Educator	Critical
Nasal airway open and oral cavity covered	Yes		Yes
Chosen clamp fits securely around tooth	Yes		No
Clamp correctly secured with floss, floss is secured and contained	Yes		Yes
Clamp handling: wings and beaks exposed, no floss caught in beaks	Yes		Yes
Accessory retention appropriately placed (if applicable)	Yes		Yes
Dam secured to frame, frame correctly oriented	Yes		Yes
Appropriate number of teeth isolated	Yes		Yes
Dam flossed interproximally, including distal to the clamp	Yes		No
Dam inverted around all teeth	Yes		No
No large tears	No		Yes

Dental Dam Isolation (DDS) Score: (Cutoff: 0.81)

Pass:

Student Feedback

In Task 4, I learned that I have to be careful when inserting the dam into a real patient's mouth. The demonstrator taught me to bunch up the dental dam, clamp and floss so it doesn't flop all over the patient's face. I also have to make sure I insert the clamp anteriorly to the patient so it doesn't cover the patient's eyes, which could potentially frighten them.

Assessor Feedback

Good work with the dental dam placement. Good effort.well done.

Student Feedback

In task 3, I found that the floss was a bit tricky to put through the hole of the clamps. The clamp forceps took a bit of getting used to. I learned I had to put a bit more pressure on the forceps to get the clamp to open wide enough to fit on the tooth.

Student Feedback

I found that it was difficult to polish the tooth with a high speed diamond bur. I need to angle my bur parallel to the cusps to ensure pearl shine finish. When preparing the restoration, make sure I angle the high speed bur perpendicular to the tooth and make sure the bur is going continuously for a smooth edge.

Assessor Feedback

Organised, good time management
Try to keep resin off cuspal inclines, keep to within or very very slightly beyond cavosurface margin only
Watch finishing damage from football bur, restoration slightly undercontoured, aim to get restorations as smooth as possible with minimal marginal excess to reduce the need for too much finishing that risks cutting enamel and hypersensitivity
