I had a lot of difficulty getting each of the teeth through their appropriate holes. I also flossed too aggressively causing some minor tears along the dam. Maybe using some lubricant would help to reduce the friction. Should also need to improve the time it takes for me to hook the dam over the wings of the clamp and make sure the damn covers the entire oral cavity

Evaluation for DDI-DDS: Dental Dam Isolation (DDS)

Marking Checklist	Student	Educator	Critical
Nasal airway open and oral cavity covered	No	No	Yes
Chosen clamp fits securely around tooth	Yes	Yes	No
Clamp correctly secured with floss, floss is secured and contained	Yes	Yes	Yes
Clamp handling: wings and beaks exposed, no floss caught in beaks	Yes	Yes	Yes
Accessory retention appropriately placed (if applicable)	No	No	Yes
Dam secured to frame, frame correctly oriented	Yes	Yes	Yes
Appropriate number of teeth isolated	No	Yes	Yes
Dam flossed interproximally, including distal to the clamp	No	No	No
Dam inverted around all teeth	No	No	No
No large tears	Yes	Yes	Yes

Dental Dam Isolation (DDS) Score: 0.7 (Cutoff: 0.81)

Pass: False

Fissure Sealant - excess sealant in the central buccal grooves, as well as along the inclines. Can pick up a lot of sealant in one go.

Small occlusal prep - angle of the handpiece was too flat, ended up making the opening of the occlusal too big and flared. Keep hand piece perpendicular, slow down and trim back bit by bit

Small occlusal restoration - not finished nor polished, cured correctly though and fissure cured as well. A bit of excess when filling the occlusal prep

**Assessor Feedback**

Excess fissure seal on cuspal inclines

Occ prep-overextended in all aspects, flared distal wall, need to ask demo for advice at all stages to minimise overextension

Yes

**assessor\_positioning\_MC2**

Yes
