Critical Incidents

date	Student ID	Clinical Incident	CI Explanation
20 Jan 2025	1129001	Yes	Student does not remeber to remove burs from handpiece when finished using them, causing me to remove them before seeing pt, unfortunately as I was removing bur hand piece slipped and a near miss occured Student is aware that removal of sharps and hazards are his responsiibility and will make an effort to improve his behavior in futuree
20 Jan 2025	734343	Yes	Perforation of tooth 26 during extirpation - advised Pt + endo referral completed.
22 Jan 2025	944792	Yes	Bur pierced my skin through the glove as I was reaching for instrument on my bracket table. Minimal bleeding. Protocol of handwashing followed. Me and demonstrator filled out incident report and followed VAHS mgmt protocol.
24 Jan 2025	1090673	Yes	Accessed incorrect tooth for rct
12 Feb 2025	1213090	Yes	nan
25 Feb 2025	993257	Yes	Lentulo spiral fractured in tooth which was already planned for extraction - extirp done today to relieve pain while waiting for long OMFS WL
03 Mar 2025	1215995	Yes	Soft tissue trauma- accidental while performed the final finishing of restoration. Performed open disclosure. Patient was very understanding. Compressed the wound with sterile gauze until the bleeding has stopped immediately. The demonstrator came and inspected the wound and placed a suture to close the wound. Intraoral photographs taken to document. Post op care at home instructions given.
21 Mar 2025	1328043	Yes	Sharps injury with suture needle. There was blood on the suture needle. Index finger left hand. No bleeding from the index finger. Immediate hand washing and alcohol rub. Followed the correct protocols and managed the situation as best as possible. Patient has agreed to a blood test immediately after and Neehal was able to get a blood test immediately at VAHS. Follow up in 3 months.
26 Mar 2025	1328023	Yes	Medical emergency Immediately following extraction: - Pt described feeling light-headed and having cold sweats. He was holding his head and his hands were shaking with erratic movements.He appeared anxious and as if he may faint. Pt asked for a cup of water which weprovided. - Placed the patient in a supine position with Dr Aarti Jaitlee present - Code Blue was called. - Dr Robyne Klein GP attended to the patient, checked med hx, symptoms, heart rate at wrist and carotid artery and blood pressure. - Symptoms reported: light-headedness, no dizziness, no clammy hands. First BP pressure reading, laying flat: 107/65 mmHg Second BP pressure reading,sitting up: 138/91 mmHg Third BP reading, standing and talking: 149/98 mmHg -Blood pressure rising, pt returned to normal in appearance and reported no symptoms of light-headedness, dizziness, cold/clammy skin. - Asked pt to sit forafurther 10min during POIG Confirmed pt was feeling well before dismissing pt. VHIMS form filled
26 Mar 2025	1220151	Yes	VHIMS Complete at Your Community Health. Student Overview: My learnings today relate to managing a patient which tranasitioned into a Code Blue. My BOH colleague conducted a limited exam today and determined that the patient required an extraction. The patient had NKA and a medical history that included chronic back pain managed with anti-convulsants. The patient was enthusiastic to have the tooth extracted today and provided informed consent. As is my regular procedure, I checked when the patient had last eaten (5-6 hours earlier, which was his routine) and inquired if he felt comfortable in the dental setting or would like me to be mindful. The patient declined repeated offers for a glucose drink and reiterated that he would like to proceed with the extraction. After administering the first carpule of LA (for a buccal infiltration of 17), my patient asked to use the washroom. I could not explain why, but I immediately felt that something was wrong. While the patient was using the facilities, I advised my BOH colleague that I do not think we will be moving ahead with the extraction. I also checked in with the interpreter (a dental assistant at PANCH) and inquired if the patient seemed to be well to her. The staff member explained that she believes all is well and the patient will be fine when he returns from the washroom. When the patient returned, he was visibly pale, breathing heavily, and seemed anxious/nervous. I immediately paused, explained that we can delay the procedure for another day. My patient continued to insist that I remove the tooth today. In response, I explained that I do not feel comfortable moving forward and would encourage the patient to have the extraction another day. The patient rapidly deteriorated, hand e started trembling, feeling very unwell, and seemed distressed. I reclined the position in the trendelenburg position. A code blue was actioned and one of the physicians on site stepped in. Fortunately, the patient's vital signs were well within the realm of normal. The patient's trembling and heavy breathing slowly subsided; additionally, the patient's skin tone returned to normal and he was once again in good spirits. This experience was initially overwhelming, however, I tried to maintain my calm and manage it one step at a time. I also tried to remain firm when I did not want to proceed ahead with the procedure because of the patient's presentation.

08 May 2025	1222329	Yes	Needle stick injury to the students while assisting to supervisor. (THWM) (UR 1049909) Informed patient, blood test done for patient and students.
08 May 2025	1327995	Yes	Needle stick injury to student assistance (UR 1049909) patient was informed, blood test done for student and patient.
13 May 2025	1328020	Yes	Vhims will be submitted today. Small 4mm laceration to left lower lip was sutured before patient dismissed. Details on Titanium and reflections above.
14 May 2025	993257	Yes	perforation of the tooth 36 while endo open and drain. Patient managed post incident appropriately as per pt wishes
