The inversion of dental dam was well done. Needed to make sure floss ligature was tighter and pushed all the way to the cervical line. Ensure the floss coming off the clamp does not sit under the dam, possibly pulling it through before putting dam over clamp is useful. Watch out for the mesial and distal gaps of the dam on clamped tooth, adjust clamp slightly to help this (or choose another better fitting clamp).

Mostly smooth, covered the oblique ridges well. Found a little bit of sealant excess on the occlusal cusp inclines.

Assessor Feedback

Some excess in areas which does not impact occlusion

Good restoration, good amount of restorative material used. Slightly rough, but that can be smoothened during the finishing and polishing steps. Fissure sealants were improved, good amount was used.

Assessor Feedback

Surface roughness requiring further polishing
Otherwise resembled tooth anatomy
