Student Feedback

Usage of wrong instrument - Not using the flat plastic which caused large tears (and possible due to lack of lubrication as well). Additionally, I need to practice the handheld mirror more to allow inversion of the rubber dam on the lingual side

Assessor Feedback

Double check use of flat plastic instrument; great first effort

Fissure sealant
- excessive placement of fissure sealant

Restoration
- need to shape resin composite more accurately as otherwise excessive finishing results in unnecessary tooth loss
- limit resin composite to just the access > a bit of resin composite found outside of access and thus required finishing

Assessor Feedback

Excess bond buccally, likely to be deficient along the buccal margin.
Iatrogenic damage on distolingual cusp.
