Student Feedback

There were minor tears in the dam around the lingual cervical aspect such as tooth 31 and 32. It was most difficult to invert the dam lingually especially of 41 and 42. The large frame I have made it difficult to always ensure nose was not obstructed. Wedjet was difficult to use so I used the floss method as accessory retention. Pierced 3 dams for this task.

Assessor Feedback

Excellent time management esp for the first dental dam session.
Small interproximal tears lower anteriors while flossing. 41/42Li everted.

Great efforts today.

Needed to be more prepared before preclinic so I am aware of the steps and can focus on the technique better

Assessor Feedback

Very good infection control. Neat placement of fissure sealant. Good final restoration. Good time management. Cavity prep slightly overextended.
