Fissure Sealant on 37O

- fairly okay procedure I think I was able to cover most fissures on the tooth and there was minimal uncured material when inspected with the dental explorer
- received positive feedback from Dr Thai, only thing I hoped was having a plastic cover on my fissure sealant so I don't have to get up midway following etch to fetch the sealant

36O Cavity Prep

- most things done okay, except the access I made was too large (from all aspects: buccal, lingual, mesial and distal!!) I need to remember to carefully remove over hanging enamel without unnecessarily making the prep to big.

36O Cavity Restoration

- not well done; excess composite not put in with the right technique (make the flat plastic your friend!!) when polishing ensure not to cut into the tooth (this is what I did) restoration nonetheless :')

Assessor Feedback

Fs was sound

Cavity prep larger than required but manage to restore relatively well, slight deficiency and flattening of anatomy of cusps

Clinical Incident

Clean gloves collected and placed on work bench
