Patient Count and Age Distribution for DDS4

The table shows ages of patients with patient count and age group distribution, but all information regarding patient ages was not filled appropriately. Thus, the age distribution is not accurate for all students. The dotted lines in the graphs indicate the age groups 0-6 and 7-17.

Average Patient count is 40.0 per student.

The highest number of patients seen by a student is 65.

The lowest number of patients seen by a student is 11.

Data is not very accurate due to missing fields in the forms but should be close.

Critical Incidents

Date	Student ID	Clinical Incident	CI Explanation
21 Mar 2025	1328043	Yes	Sharps injury with suture needle. There was blood on the suture needle. Index finger left hand. No bleeding from the index finger. Immediate hand washing and alcohol rub. Followed the correct protocols and managed the situation as best as possible. Patient has agreed to a blood test immediately after and Neehal was able to get a blood test immediately at VAHS. Follow up in 3 months.
26 Mar 2025	1328023	Yes	Medical emergency Immediately following extraction: - Pt described feeling light-headed and having cold sweats. He was holding his head and his hands were shaking with erratic movements. He appeared anxious and as if he may faint. Pt asked for a cup of water which we provided. - Placed the patient in a supine position with Dr Aarti Jaitlee present - Code Blue was called. - Dr Robyne Klein GP attended to the patient, checked med hx, symptoms, heart rate at wrist and carotid artery and blood pressure. - Symptoms reported: light-headedness, no dizziness, no clammy hands. First BP pressure reading, laying flat: 107/65 mmHg Second BP pressure reading, sitting up: 138/91 mmHg Third BP reading, standing and talking: 149/98 mmHg - Blood pressure rising, pt returned to normal in appearance and reported no symptoms of light-headedness, dizziness, cold/clammy skin. - Asked pt to sit for a further 10min during POIG Confirmed pt was feeling well before dismissing pt. VHIMS form filled
26 Mar 2025	1220151	Yes	VHIMS Complete at Your Community Health. Student Overview: My learnings today relate to managing a patient which transitioned into a Code Blue. My BOH colleague conducted a limited exam today and determined that the patient required an extraction. The patient had NKA and a medical history that included chronic back pain managed with anti-convulsants. The patient was enthusiastic to have the tooth extracted today and provided informed consent. As is my regular procedure, I checked when the patient had last eaten (5-6 hours earlier, which was his routine) and inquired if he felt comfortable in the dental setting or would like me to be mindful. The patient declined repeated offers for a glucose drink and reiterated that he would like to proceed with the extraction. After administering the first carpule of LA (for a buccal infiltration of 17), my patient asked to use the washroom. I could not explain why, but I immediately felt that something was wrong. While the patient was using the facilities, I advised my BOH colleague that I do not think we will be moving ahead with the extraction. I also checked in with the interpreter (a dental assistant at PANCH) and inquired if the patient seemed to be well to her. The staff member explained that she believes all is well and the patient will be fine when he returns from the washroom. When the patient returned, he was visibly pale, breathing heavily, and seemed anxious/nervous. I immediately paused, explained that we can delay the procedure for another day. My patient continued to insist that I remove the tooth today. In response, I explained that I do not feel comfortable moving forward and would encourage the patient to have the extraction another day. The patient rapidly deteriorated, hands started trembling, feeling very unwell, and seemed distressed. I reclined the position in the Trendelenburg position. A code blue was actioned and one of the physicians on site stepped in. Fortunately, the patient's vital signs were well within the realm of normal. The patient's trembling and heavy breathing slowly subsided; additionally, the patient's skin tone returned to normal and he was once again in good spirits. This experience was initially overwhelming, however, I tried to maintain my calm and manage it one step at a time. I also tried to remain firm when I did not want to proceed ahead with the procedure because of the patient's presentation.

IPC Summary

Metric	Value
Total number of forms submitted	108
Role Distribution	Operator: 108 Support Operator: 38
Age Range Counts	0-6: 6 7-17: 38 18+: 188
