Ripped the dental dam a couple times. Found that It is more efficient to place the frame, dental dam and clamp all at the same time which would save time! Difficult inverting the dental dam into the gingivae. Need to do this better the next time around.

Assessor Feedback

Flip dam over clamp wing

It was difficult to clean up the unsupported enamel. I should have located the carie clearer to avoid make such a large cavity prep. Always check with a sickle probe for unsupported enamel.

Assessor Feedback

Overextension generally approx 1mm around circumference

Next time i need to punch the holes early.
Dont use too much lubricant.
Slip only the wing on into the dental dam.
Put both wings first then put the rest on.

Fissure sealant:
Check with explorer. It should feel v smooth.
Make sure to move the light away to prevent curing while i place the fissure sealant.

Assessor Feedback

Dental dam isolation 37-47, has Jason move on due to time constraints. Large tears and holes+. Good attitude despite difficulties this session, keep it up Jason
