### Student Feedback

I really struggled at the beginning of the dental dam isolation lab mainly because I was just a little confused about the steps and what exactly to do. After some time and some corrections from my assessor, I slowly but gradually got into the groove of things and started going at a faster pace. For next time, I do believe I should go over the material one more time before the cons labs in order to be more prepared and better ready to go at a faster pace at the beginning.

### Assessor Feedback

Had trouble with inserting winged clamp through punched hole. Do some visual training through videos again, think about orientation of objects and hands.

I really messed up my first small occlusal cavity prep on the 36, however on my second try I understood where my errors were and I adjusted accordingly. I have a habit of drilling too deep when Im inserting my fast speed handpiece, so for next time I need to drill slower and focus on my bicep-lingual hand movements

*Assessor Feedback*

Entry too deep, cavity too deep
