Student Feedback

It was difficult to isolate all teeth completely without tearing the dam. I'm wondering whether it's because of the hole size chosen wrongly or I'm putting too much pressure. It was also difficult to floss between tight teeth while trying to put the teeth through the right hole, this made flossing harder. Also try to put my arms on one side of patient's head instead of around the neck. Accessory retention distal to 44 was difficult, I was unable to put the wedjet through, perhaps another method would be easier. I also need to work on timing - did not complete the activity within the time limit. Posture needs work - I need to remind myself to sit up straight Overall an ok first attempt.

Assessor Feedback

Some nice reflections on the lecture today, Ann. Be more mindful of posture when working on your manikin. Be mindful of patient comfort ie. choking when applying dental dam. Starting to be aware of infection control practices, I observed you clasped your gloved hands together when idle - good practice here.

Evaluation for DDI-DDS: Dental Dam Isolation (DDS)

Marking Checklist	Student	Educator	Critical
Nasal airway open and oral cavity covered	Yes	Yes	Yes
Chosen clamp fits securely around tooth	Yes	Yes	No
Clamp correctly secured with floss, floss is secured and contained	Yes	No	Yes
Clamp handling: wings and beaks exposed, no floss caught in beaks	Yes	Yes	Yes
Accessory retention appropriately placed (if applicable)	No	No	Yes
Dam secured to frame, frame correctly oriented	Yes	Yes	Yes
Appropriate number of teeth isolated	Yes	Yes	Yes
Dam flossed interproximally, including distal to the clamp	Yes	Yes	No
Dam inverted around all teeth	No	Yes	No
No large tears	No	Yes	Yes

Dental Dam Isolation (DDS) Score: 0.73 (Cutoff: 0.81)

Pass: False

Easier than expected but it was a little difficult to see where the sealant had gone over and where it didn't cover.

Assessor Feedback

Great fissure sealant

Cavity prep was too wide - probably because high speed bur did not cut smoothly so I had to wider the access to smooth it out - hand control need practising.
I also left the bond and composite in light for too long, they cured before I could put it in and shape the contour. I had to use a polishing bur to smooth out the cured composite that wasn't shaped properly then re-etch, primer and bond before putting new composite again. I've learnt to work quicker to avoid composite curing.

Assessor Feedback

Access a bit wide mesiodistally and buccal lingually. Use sickle probe to check for surface irregularity on internal cavity walls.
Remember to angle flat plastic/ball burnisher when adapting composite

Clinical Incident

Make sure to remove burs from handpieces
