**Student Feedback**

I struggled to get the dam wrapped around each tooth, and kept ripping the dam. I started to use lubricant, but ran out of time to give it a good go. I think there is scope to be more efficient with securing the dam with floss, and orienting the dam at the start. Now that I know how to do these steps, I can do them quickly next time, and can designate some time to practice. It will be useful to look through the demonstration video on canvas as this provide me with my sole useful tips now that I have completed the task.

**Assessor Feedback**

Task not completed due RD tears - to gradually work on handlin of RD, using lubricant where needed, and technique over speed.

Overall, was happy with the application of sealant. I struggled seeing where it was applied, so I need to develop an eye for it which will occur over time.

### Student Feedback

Apart from my access being too large, I was relatively happy with my preparation. In future, I just need to be mindful of the location of the caries, however I imagine the caries will be more visible in clinic. For my restoration, the buccal was deficient, and it was not very smooth. This was mainly because I struggled with timing towards the end, but this will improve in the future with practice.

### Assessor Feedback

Significantly overextended in all dimensions. Unsupported enamel correctly identified. Buccal margin likely to be deficient.
