Did not finish task 5 due to many tears in dental dam. Need to work on cleaner whole punches. I was able to get good practice on putting wings of clamps through the dental dam because I was struggling with it initially.

Assessor Feedback

Well done today

I need to work on my access size on the occlusal surface and also use much lighter pressure when packing in the composite so my surface is more smooth rather than rough. I also need to be more conservative with the amount of conseal I use because my fissure sealant flowed into the restoration.

Assessor Feedback

Very conservative approach. Practice taking burs in and out of hand pieces.
Final prep overextended, lingual gouge.
Finishing and polishing yet to assess.
