**Student Feedback**

Had some difficulties in the task 5 isolation from teeth 37 to 44 and hence was not able to fully complete the task to the point of using accessory retention or getting my dam inversion checked. Struggled a bit with flossing the other teeth interproximally and had some small tears as a result.  
Could work on the placement of floss around the clamp (need to make additional loops around the bow).  
Setting up the teeth with the clamp seems to be pretty straightforward. Would be desirable to develop a better understanding for the selection of clamps as I wasnt able to try out the other clamps for the other teeth.

**Assessor Feedback**

Dam tension too tight causing gaps and small tears from flossing

Drilling was deeper than required and access was larger than demonstrated model. Difficulties smoothening the internal edges.

**Assessor Feedback**

Keep slow and high speed burs moving to create a smooth outline and internal surfaces
